Why I Am CNTA

Sonya Patton

sonya.patton@srs.gov

"I have spent 30 years working in the nuclear industry. I value CNTA's expertise and willingness to educate the public regarding the level of controls to ensure our industry remains one of the safest, if not the safest, industrial work environment."

Ken Stephens

kenstephens@comcast.net

I am a CNTA member for three main reasons. First, I get to work with teachers to help the next generation be nuclear-literate. Second, I get to work with young professionals, which keeps me young and lets me know that the future is in good hands. Third, I thoroughly enjoy the fellowship with the nicest group of people anybody could imagine.

Craig McMullin

craig.mcmullin@srnl.doe.gov

"I've supported CNTA for years to keep abreast of the nuclear industry that exists and continues to evolve in the CSRA, nationally and internationally. CNTA provides opportunities to network with leaders, decision makers and technical experts that will take the nuclear industry well into the future. The CNTA is a professional organization which represents a wide cross-section of the community that advocates all things nuclear via program functions, education and publications which I enjoy thoroughly."

Sunny Lunka

sunnyklunka@gmail.com

As a chemical engineer, there are a lot of industries I could potentially work in. CNTA has opened my eyes to the significance of the work being done across the nuclear industry and it's important to share that with family, friends, and the community.

Lunka

Lyddie Hansen

lyddiehansen@bellsouth.net

I am a member of CNTA because I care about Aiken and the CSRA. The various educational outreach programs offered by CNTA provide an accurate, science-based view of all things nuclear. The Savannah River Site is important to the financial well-being of our community. Our citizens and our elected officials need the truth to ensure sound decision making for our community's future.

Dr. Forest Mahan

mahanf@atc.edu

I am proud to be a member of Citizens for Nuclear Technology Awareness (CNTA). As the President of Aiken Technical College, one of my goals is to engage with businesses and industries in our local area and to have an understanding of their current activities, challenges, outlook, and opportunities. Being a part of this organization gives me insight into how nuclear technology is being used in our area and ways the college can best do our part in providing educational and workforce development opportunities that adequately prepare students for successful careers.
